Conditions in Universe: INTSTATUS in ('1' '2' '3')

User Notes: Values 001 - 840 reflect Federal Information Processing Standards (FIPS) three-digit county codes as of 2010. The three-digit codes must be combined with the STATE variable to create unique county codes. More information on these codes can be found at https://www.census.gov/programs-surveys/popest/geographies/reference-files.html.

 Census maintains the Master Address File (MAF), which contains a record for every housing unit in the nation and acts as a frame for many Census administered surveys. From 2015 onwards, the American Housing Survey (AHS) drew its sample from the MAF. While the geographic codes on the MAF are highly accurate, they are imperfect. During sample selection, a small percentage of housing units selected from the MAF have incorrect or missing geography variables. In the case of missing geography data, Census will impute values. This may impact the county values from survey year to survey year.

User Notes: OMB13CBSA indicates the Core Based Statistical Area (CBSA) code at the time the case was selected for the AHS sample. In rare instances, the geocoding may be corrected after the case has been selected. When this happens, the OMB13CBSA_IUF variable will reflect the updated location. Additionally, while the PUF only shows CBSA codes for areas which AHS publishes, the IUF shows CBSA codes for all cases located in any CBSA. Internal users should continue to use OMB13CBSA to produce any tabulations for public release. Also see OMB13CBSA.

User Notes: Some AHS modules are considered to be "topical" as opposed to "core." Topical modules are included on a rotating basis and are usually asked of only half the AHS sample. When a topical module is only asked of half the sample a special weight is provided that must be used for estimating those data items. SP1WEIGHT is only present for records that are in group 1; SP2WEIGHT is only present for records in group 2. Beginning in 2023, some "topical" module questions were embedded into existing "core" modules. Due to this, the 2023 AHS instrument includes "topical" questions that were included in Group 1, Group 2, and the full sample. For more details regarding 2023 "topical" content, including each variable's topic, group, and weight, reference "2023 AHS Topical Content Reference File."
 In 2023, Group 1 included Heat Risk and Housing Insecurity; Group 2 included Healthy Homes and Power Outage.
 In 2021, Group 1 included the topic Recent Mover and Neighborhood Quality; Group 2 included Pets, Wildfire Risk, Smokers.
 In 2019, Group 1 included the topic Food Security and Post-Secondary Education; Group 2 included Accessibility.
 In 2017, Group 1 included the topic Commuting; Group 2 included Disaster Planning.
 In 2015, Group 1 included the topics Art, Food Security, and Housing Counseling; Group 2 included Healthy Homes.

User Notes: Each housing unit in the AHS represents itself and a number of other units. In order to develop estimates using the AHS the final weight must be applied to the survey data. The final weight starts with the inverse of the sampling fraction (PWT) and incorporates several adjustment factors that minimize sampling errors and errors from incomplete survey data.

 The Noninterview Adjustment Factor increases the weight of each interviewed unit to account for sampled units that were not interviewed. This adjustment is applied to five classes of geography: central cities, urban and rural inside MSAs, urban and rural outside MSAs. Over time the geographic boundaries related to these five classes may be redefined by local or state governments. For National surveys, WEIGHT uses the boundaries as they were officially defined in 1980. For Metro surveys, WEIGHT uses the boundaries as they were defined in the decennial year prior to the survey year.

 More information on weighting can be found at www.census.gov/programs-surveys/ahs/tech-documentation/def-errors-changes.html.

 WEIGHT may be used with all Metro surveys, and for National survey years 1997, 1999, and 2015 and later. For National survey years 2001 to 2013, WGT90GEO should be used as the final weight.

Question Text: See User Notes

Instrument Variable Name(s): NA

Disclosure: None

Conditions in Universe: INTSTATUS = '1' and AGE >= 18 and SOGIRESP = PLINE

User Notes: SOGI Respondents were first asked for their sex recorded at birth. Sex recorded at birth refers to an individual's biological status as male or female. Sex recorded at birth is associated with physical attributes, such as anatomy and chromosomes. Next, they were asked whether they describe themselves as male, female, transgender, or another term they specify. Census then classified them into the 6 response categories.

 To create household-level estimates, merge household and person files using the CONTROL variable as the key. Analyses can then be correctly conducted on SOGIRGP, SOGIRSOP, and SOGIRLGBTP by retaining the data where PLINE equals SOGIRESP.

Conditions in Universe: INTSTATUS = '1' and TENURE = '1' and MORTSTAT in ('2' '3' '4' '5')

User Notes: MORTAMT is the sum of PMTAMT (mortgage payment amount) across all mortgages. Some households' property tax and/or homeowner insurance payments are included in a mortgage payment. The property tax and/or homeowner insurance amounts are subtracted from the sum of PMTAMT in such cases. Occasionally the amount of property tax and/or homeowner insurance is greater than the mortgage payment, creating a negative MORTAMT value.

Conditions in Universe: INTSTATUS = '1' and TENURE = '1' and HOWBUY <> '5'

User Notes: Respondents could report in either dollars or percentage (DWNAMT - Considering all sources of money, what was the total amount of the down payment? You may answer in dollars or percent.) If reported in dollars (DWNDLR) the value was converted to percent for the microdata. DWNPCT is the Instrument variable used to collect the percentage.

 From 2015 to 2019, units that did not have a down payment were considered out of universe for the question. In 2021 units without a down payment are now in universe for the question and are assigned to DWNPAYPCT category 0: no down payment.

 In 2015 to 2019, units with down payment dollar amounts that rounded down to zero when converted to a percentage of the purchase price were previously included in DWNPAYPCT's zero category. In 2021 these units with down payments that round down to zero percent are included in DWNPAYPCT category 1: greater than zero to 2 percent.

Conditions in Universe: INTSTATUS = '1' or (INTSTATUS in ('2' '3') and (VACANCY in ('01' '02' '04') or (VACANCY in ('03' '05') and CONDO = '1')))

User Notes: Monthly electric amount represents average monthly costs paid for electricity. Average monthly costs are estimated from regression models developed from the Residential Energy Consumption Survey (RECS) sponsored by the Department of Energy (DOE). The RECS collects data on electricity consumption and costs, as well as some housing and household characteristics similar to those collected in the AHS. Housing and household characteristics and heating and cooling degree days from the AHS are used as inputs to the models. Separate models are applied to units that use electricity alone and those that use both electricity and natural gas. When electricity is billed separately or can be modeled separately, the models estimate electricity consumption, which is converted into costs with price data. When the electric bill is combined with a utility that cannot be modeled separately (i.e., oil, other fuels, trash, water), the models estimate costs with additional information on either the last bill or the respondent's best estimate of average monthly electric costs. Amounts are for occupied units that use and pay for electricity, where the electricity cost is not included in rent, site rent, condo fee, or other fee, or included in another utility cost. Costs are not collected for vacant units, but information is collected on whether the unit would be billed separately for electricity or if the electric costs would be included in the rent, condo fee, or other charges.

User Notes: Monthly gas amount represents average monthly costs paid for gas (note: the variable GASSOURCE indicates whether gas is delivered through underground pipes or is bottled gas). Average monthly costs are estimated from

regression models developed from the Residential Energy Consumption Survey (RECS) sponsored by the Department of Energy (DOE). The RECS collects data on gas consumption and costs, as well as some housing and household characteristics similar to those collected in the AHS. Separate models were developed for piped natural gas and bottled liquid petroleum gas (propane). Housing and household characteristics and heating and cooling degree days from the AHS are used as inputs to the models. When gas is billed separately or can be modeled separately, the models estimate gas consumption, which is converted into costs with price data. When the gas bill is combined with a utility that cannot be modeled separately (i.e., oil, other fuels, trash, water), the models estimate costs with additional information on either the last bill or the respondent's best estimate of average monthly gas costs. Conditions in Universe: INTSTATUS = '1' or (INTSTATUS in ('2' '3') and (VACANCY in ('01' '02' '04') or (VACANCY in ('03' '05') and CONDO = '1')))

User Notes: Monthly oil amount represents average monthly costs paid for oil. Respondents who use oil are asked to estimate the total cost for fuel oil in the past 12 months. The total amount for the past 12 months is divided by 12 to obtain the average monthly amount. Amounts are for occupied units that use and pay for oil, where the oil cost is not included in rent, site rent, condo fee, or other fee, or included in another utility cost.
